FACTS REGARDING SWAN LABELLED WASHING DETERGENTS

Swan labelled washing detergents for textiles are among the least environmentally polluting in their category. They fulfill the strong demands for the substances' environmental and health impact and for washing quality.

Among strong environmental demands are that all substances must be easily degradable in the environment and can subsequently not include optical whitener.

Among demands for substances regarding the health of human beings, the products cannot contain substances which are known to be carcinogenic, mutagenic (can change DNA), toxic for reproduction or allergenic. Consequently, they cannot contain perfume and only in limited amounts coloring agents and preserving agents.

Finally, the manufacturer must be able to document that the products' washing abilities are as good as equivalent non-environmental products.

More information about the product, dosage and usage can be found on the product info sheet. Find it here:
