

## ENZYMATIC CLEANER FOR MEMBRANES

# RO DAN 300E

Ro Dan 300 E is used for enzymatic cleaning of membrane filtering plants in combination with for instance Ro Dan 97 or Ro Dan 220.

- WIDE TEMPERATURE RANGE
- MORE PRODUCTION TIME
- EFFICIENT ENZYME PRODUCT

## ■ DOSAGE

Dosage: 0,1 - 1%  
Temperature: 30 - 50 °C  
Contact time: 10 min - 6 hours  
pH 10 - 10,8

After cleaning, the enzyme has to be inactivated by an acid or alkaline step.

Temperature and pH should not exceed the limit of the the membrane supplier.

**pH:**  
In delivery state

~ 4,5

## ■ PROPERTIES

Ro Dan 300E efficiently and gently removes protein and other organic materials from membrane surfaces. Ro Dan 300 E does not require as high temperature levels as traditional products as it has excellent cleaning effect from only 30°C.

A lower cleaning temperature.  
Increased savings on heating the membrane system during cleaning.  
More production time  
Same good cleaning effect at 30°C as at 50°C.

A more environmentally friendly product compared to traditional products.

**More information about usage and dosage can be found on the product information sheet. Please find it on:**
